Damasio Eli Gerena IV
My presentation PDF info.

      The process for choosing my plugin took a matter of seconds. When I read the assignment I was immediately brought back to something I had seen before. I just had to google for a few hours to find it. Once I got down that it was a presentation I knew I had to do a presentation on a presentation plugin. Impress is a non jquery plugin. With a specific set of uses that could still be molded for any project. Impress.js is a javascript plugin that works in a css3 capable browser or with proper shivs giving the css3 capabilities to the browser. Using a simple wrapper and a set class for each presentation slide. You can run wild rotating scaling, and creating visual 3d effects with ease, as well as a good understanding of what you want to show. With impress.js you could paint a photo easily. Or design a website made purely of words. I really don't know how I would do that, yet the possibility of doing so makes a artistically incapable person like myself excited when I use it.

      As far as the presentation itself I feel okay at best with it. I do not know recording software as much as I would like. Nor sound editing software. I am actually retaking RMO due to these same issues. The presentation truthfully would have been absolutely awesome if I could do it in person. I love speaking in front of people and interacting as they see me and watch my presentation. Unfortunately not my choice so here we are. I hope you enjoy the presentation and impress.js it very seriously was fun messing with it. Have a excellent week and talk to you again later.
